Silver Maple Club, Department of Civil Engineering organized a Workshop for final year Civil Engineering Students.

Subject: READING OF STRUCTURAL DRAWINGS
Date: 10-09-2016
Day: Saturday
Timings: 09:30 a.m. to 12:00 p.m.
Session Conducted by: Prof. Harsh Morbia

Session: Understanding the Structural Drawings is one of the most important aspects in Civil Engineering. Before execution, a Civil Engineer must understand the drawings for proper execution. As a part of output, a Structural Engineer must know what details are to be incorporated in drawings.

Keeping this in mind, we have conducted the workshop which was well appreciated by students. Architectural Drawing and Structural Drawings for Footings, Columns, Beams and Slabs with Structural Layouts and Details were explained to students in detail. Actual drawings from industries were used for the same. Students understood various practical aspects of Civil Engineering as well.
